Re3 Ready To Take On Waste!

19/01/2006

Today marked the official start of Re3 as a 21st century waste treatment company. The company who intends to treat waste by diverting it away from landfill and into recyclables using new technology signed its company agreement at the Armagh City Hotel.

Speaking at the launch, Chief Executive Professor Debbie Boyd said "This is an important day for me and my company. I have spent many years researching and perfecting this new technology. Our vision at Re3 is straightforward. We are committed to bringing innovative and advanced solid waste technologies to our customers and their communities. Re3 will accomplish this goal through the disciplines of science and engineering with a team of creative and highly motivated individuals while ensuring regulatory compliance and utmost respect for the community.

Also speaking at the event, Irish American Private Investor Brendan Hughes said: "I have every confidence that this company will achieve the ambitious goals it has identified in its Business Plan. Personally, I am delighted to be investing in a Northern Irish company which is innovative and forward thinking and which is creating technology which can address the global issue of waste."

Re3 plans to open four plants across Ireland over the next twenty four months.
